62-16437

Trans. of Akademiya Nauk SSSR. Geofizicheskii Institut. Trudy, 1953, v. 20(147) p. 20-36.

DESCRIPTORS: *Wave analysis, *Vibration, Propagation, *Elasticity.

Sinusoidal vibrations excited by a points source in an ideally elastic medium consisting of a layer lying between two semi-spaces are considered. It is shown that the main part of the displacement remote from the source consists of waves of a specific type. Some of the properties of these waves are investigated. (Author)

1960 [62]p. (15 figs. omitted) 31 refs.
Order from LC or SLA m\$3.90, ph\$10.80 61-19233

Trans. of Akademiya Nauk SSSR, Geofizicheskiy
Institut, Trudy, 1956, no. 34(161) p. 243-268.

The analysis of seismo-acoustic processes anticipating
blowouts suggests that the prognosis of the approaching
moment of a blowout is possible from an acceleration of
the seismo-acoustic activity of the coal seam. More-
over, the most characteristic indication of "blowout
danger" of the seam is not so much the travel velocity
of seismo-acoustic impulses as the amount of energy
released per unit time in the fracture-forming process.
